04 05 01  GENERAL

1. Performance Standards
   ii. Typical masonry ties to be stainless steel; 2-piece. Tie type and spacing to be identified in the specifications.
   iii. Masonry expansion and control joints to be identified on the drawings.
   iv. All structural steel masonry support to be stainless steel or hot-dipped galvanized.
   v. Where galvanized sheet metal or aluminum masonry thru-wall flashings are used, provide fully reinforced, bonded sheet membrane separator between masonry and flashing.
   vi. Veneer masonry surfaces near grade to receive a clear anti-graffiti coating where specified by FMGT.
