Comming up at Gustavson

Gustavson’s Greenhouse Gas Emissions Report shows our carbon impact in the past, our footprint now, and what actions we can take to step into a lower-carbon future.

On Sept 28, CSSI and Gustavson’s professional-development team are co-hosting a lunchtime presentation with Synergy consultants, who created the report for us.

Gustavson employees who would like to attend the presentation but have not yet RSVP’d to their calendar invitation, please let us know. Details are in the Connect calendar. We’d love to see you there next Wednesday!

Tarmac lays the foundation for concrete energy reduction

According to edie.net, Tarmac’s CSR report highlights that the UK company is making “good progress” towards its 2020 target of a 37% reduction in carbon emissions.

Tarmac is also increasing the use of waste-derived fuels to reduce emissions. In 2015, 33% of the heat input to the company’s cement kilns came from waste-derived fuels.

The construction firm says it is significantly cutting waste by using millions of tonnes of waste and secondary materials from other sectors as raw materials in its products.

Case study: SMEs

Two years ago global company Sodexo made a Clinton Global Initiative Commitment to Action to buy globally $1 billion in products and services over three years from micro, small, and medium-size enterprises (SMEs), especially those owned and operated by women.

Sodexo has released a new case study detailing the progress it has made to work with 4,700 SMEs around the world.
