Course Description:
This course investigates the moral and conceptual dimensions of environmental issues. Different philosophies of the relation between humans and nature will be compared. Issues to be addressed include: Does it make sense to attribute intrinsic value to non-human nature? What is the moral status of non-human animals? Is animal liberation compatible with promoting flourishing ecosystems? What political or cultural factors underlie environmental exploitation? Is industrial society in general, and capitalism in particular, compatible with environmentalism? What are some alternative visions of how humans should relate to their environments?
