Competencies are the skills, knowledge and attributes gained through every work, educational, volunteer and life experience.

UVic students in the Electrical Engineering program develop the following program-specific competencies. We worked with the Department of Electrical and Computer Engineering to develop this document.

**PROFESSIONAL PRACTICE**

---

**Behaves in accordance with the standards and code of ethics of the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC)**

- Prioritizes the safety, health and welfare of public and environmental protection
- Promotes health and safety within the workplace
- Undertakes and is responsible for professional assignments only when qualified
- Maintains confidentiality and avoids a conflict of interest
- Keeps informed to maintain competence
- Acts with fairness, courtesy and good faith towards clients, colleagues and others
- Extends public knowledge and appreciation of engineering

**RELIABILITY, SAFETY AND FAILURE ANALYSIS**

---

**Develops systems that are reliable and effective by mitigating risk and reducing failure**

- Maintains an awareness of the quality assurance standards and testing procedures
- Ensures that systems or components perform their required function for the required duration under the stated conditions
- Maintains a current knowledge and awareness of requisite safety standards
- Understands the consequences of failure and reduces their impact
- Establishes the mean time between failures when assessing reliability

**DESIGN**

---

**Gathers requirements, develops models and creates prototypes in a timely and effective manner to increase a project’s safety and success**

- Gathers full requirements for a project
- Understands the client’s needs
- Models a solution using the appropriate tools
- Relates and justifies the design process to the client
- Implements designs that are safe and effective
- Demonstrates awareness of how the design integrates into its environment
ENGINEERING TOOLS

Uses a broad range of Engineering tools, applications and software.

- Designs equipment and systems using a variety of software packages
- Simulates mechanical and electronic systems using the appropriate tools
- Analyses systems, equipment and data using the correct tools
- Operates mechanical equipment in a lab or workshop safely and effectively
- Uses electronics and electrical equipment in a careful and accurate manner
- Develops software and scripts in a variety of environments and languages
- Uses computer software and systems in an appropriate manner
- Understands database concepts and usage and uses them effectively
- Researches and recommends new tools where existing tools are inadequate
- Chooses tools based on their comparative strengths and weaknesses

ENGINEERING KNOWLEDGE

Understands the broad scope of disciplines that support engineering theory and practice

- Demonstrates knowledge of the mathematical fundamentals of engineering
- Applies the correct statistical methods to analyze and investigate data
- Understands the supporting natural sciences for their discipline of engineering
- Maintains a comprehensive knowledge of the engineering fundamentals
- Demonstrates an understanding of engineering economics
- Comprehends how engineering specifics integrate into a larger project
- Studies companion subjects to aid a projects success

POWER AND ENERGY SYSTEMS

Demonstrates knowledge of power and energy systems fundamentals and their integration within the modern electrical grid and community

- Applies the fundamental science associated with electricity
- Understands the generation, transmission, distribution and processing of energy
- Considers the characteristics of an energy system in requirements gathering
- Devises improvements in energy usage utilizing alternative systems
- Outlines the fault tolerant, reliable operation of power systems
- Plans research and development of new energy systems

CONTROL THEORY AND SYSTEMS

Understands how control systems function and their use

- Applies the fundamentals of control theory in the design of dynamic systems
- Demonstrates an understanding of feedback control systems
- Identifies design specifications
- Evaluates system performance
- Identifies components of a dc servo system and its use in motion control
- Implements a control system using feedback circuits
- Demonstrates an understanding of processors and microcontrollers

CONTROL THEORY AND SYSTEMS

Understands how control systems function and their use

- Utilizes the necessary tools to improve system performance
- Understands the transfer of information from one system component to another
- Compares performance of similar systems using common metrics
- Identifies the optimal system for given problem
- Works with different CPU architectures
NETWORKS, HARDWARE AND COMMUNICATIONS

Understands computer networking principles and engineering

- Understands layered network architecture
- Uses different digital communication networks to transmit data
- Works with LANs and WANs
- Applies different network protocols at different layers
- Protects networks from unauthorized access using the appropriate policies in conjunction with the underlying computer network infrastructure
- Identifies mobile wireless communications techniques and issues affecting multimedia quality of service
- Implements different types of buses, interrupts, families of processors and instruction sets
