Facilities Notice

Title: Shutdown of Reverse Osmosis Water System

Location: Petch Building and Bob Wright Centre

Description: In order to remove a redundant loop of the Reverse Osmosis Water system Facilities Management and Kinetic Construction will need to complete a shutdown of the system across both Petch Building and the Bob Wright Centre.

The redundant loop will be removed on Thursday, January 11th, 2018. Following the removal of the loop the system will need to be purged, purified and tested prior to being recommissioned. It is anticipated that this process will take approximately five days, and the target is to be operational again by Tuesday, January 16th.

To mitigate the downtime, please take the opportunity to fill appropriate vessels with RO water by end of day on Wednesday, January 10th, 2018.

Please direct any questions or concerns to Scott Scholz and Stephen Horak.

Time frame: Thursday, January 11th at 7:30 AM – Tuesday, January 16th at 7:30 AM
