Title: PETCH Building – Update: Phase III Power Shutdown

Location: Petch Building

Description: Please see updates below on the timings of the work associated with the upgrade of the Petch Building emergency generator in PCH 047.

Time frame: Saturday, March 3: All work completed as planned.

March 5 – March 16: Ongoing installation of the new emergency generator and associated mechanical and electrical services.

Saturday, March 17: De-energising of emergency and utility power is now postponed.

March 19 – 20: Final checks and pre-commission testing.

Wednesday March 21: Generator commissioning day. The process is expected to take 8 hours, and will include a load test for the new generator. Power to the building will be unaffected during the testing.

Upon successful commissioning of the generator, emergency power will be de-energised for 15 minutes. This is estimated to take place at 5pm.

There will then be a 15-minute test of the new emergency power system, after which PCH will be backed up by the new 200kW generator and the shutdowns will be complete.
