Title: MacLaurin Building D-Wing - Seismic Upgrade Project

Location: MacLaurin Building D-Wing

Description: As part of the Knowledge Infrastructure Program, the MacLaurin D-Wing will be undergoing an extensive life safety seismic upgrade over the next two years.

Facilities Management will be working with Kinetic Construction to construct reinforced vertical concrete shear walls. This requires excavating down below existing foundations, and penetrating up through the floors and at times through the roof. There will be steel beams installed at certain ceiling areas, and the roof and skylights will receive reinforcing. The former Curriculum Library area will undergo interior renovations to provide temporary classroom space for the duration of the renovation work. Washrooms and some classrooms will receive upgrades to interior finishes.

There will be increased noise levels and vibration disturbances during this work.

An Open House is scheduled for Tuesday, November 27 in MacLaurin Building, Room D116. This is a great opportunity to find out about the project, meet the project team and ask any questions. Information sessions will be held at 2:30 pm and 3:30 pm.

Time frame: January 2019 – September 2021
