School of Health Information Science Seminar:

Health Technology Safety Current Issues and Advances in the Science

Speaker:

Dr. Elizabeth Borycki

Professor, School of Health Information Science,
University of Victoria

OCT 12th on Zoom
12:00PM PT

Health technology safety has emerged an important area of research and practice in health informatics. Over the past 15 years we have seen substantive changes in this area of health informatics study and applied practice. In this presentation Dr. Borycki will review some of the current issues and advances in the science of addressing health technology safety issues. The presentation will review the research and experiences to date in understanding how technology can inadvertently contribute to errors as well as how healthcare organisations can manage these types of incidents. A toolkit of techniques developed at the Global Laboratory for Digital Health Innovation used to investigate, understand and prevent safety events will be presented.
