Standards 101

HINF537- Health Information Exchange Standards Virtual Workshop

Day 2 – May 16th, 2023

Julie Boutin, Standards Specialist
Janice Spence, Standards Specialist
Canada Health Infoway

About Us

Janice Spence

- Standards Specialist, National Release Centre, Canada Health Infoway
- B.Sc., CHIM, CTSS, CPHIMS-CA, FHIR R4 Certified
- Experience in healthcare and government (health information management, data integrity management, and health terminology standards subject matter expert)
- 20 years HIM industry experience, 9 in HIE standards

Julie Boutin

- Standards Specialist, National Release Centre, Canada Health Infoway
- Graduate Diploma in Health Informatics from University of Sherbrooke
- SNOMED CT Authoring Level 2 Certification
- Experience in healthcare and government (lab, LIS integration to QHR, implementing standards in support of health information systems)
- Involved in translation process for SNOMED CT content

Agenda

- Who we are
- What services we offer
- Overview of Health Terminology and Data Exchange Standards
- Applying Interoperability Standards
- What is on the horizon
- How to get involved

Canada Health Infoway

About Infoway and the Interoperability Standards Team

About Infoway

- Established in 2001
- Independent, not-for-profit corporation
- Equally accountable to 14 federal, provincial and territorial governments through the Members of the Corporation (f/p/t Deputy Ministers of Health)
- Independent Board of Directors appointed by the Members

Infoway's Mandate

- **National leadership** role in accelerating collective digital health efforts
- Ensuring a pan-Canadian **vision, strategy, architecture and plan**
- Ensuring **national standards** and common understandings about **privacy and security**

Who We Are

**WE MOBILIZE CANADA'S HEALTH CARE
STAKEHOLDERS TOWARDS A
REIMAGINED FUTURE.**

Vision

**Healthier Canadians through
innovative digital health solutions**

Mission

**Infoway will bring a pan-Canadian
focus to: improving the patient
experience, improving the health
of populations, and unlocking
value for the health system**

Infoway's Focus

- PrescribeIT excellence and adoption
- Pan-Canadian interoperability across all F/P/T health systems
 - Availability of health data in a common format
 - Secure exchange of data in health care settings
 - Access to Canadians' health data in a digital, movable form

Our Partners and Collaborators

Governments

Provinces and territories

Health care organizations

Industry

Clinicians

Patients

Infoway's Goals

Connecting The Health System

Connected Care. A Healthier Canada.

Canadians expect a high-performing, world-class health system, but Canada's health system faces unprecedented strain. These challenges demand an extraordinary response to keep Canadians healthy. Harnessing data sharing will result in "connected care" and a modern health system.

Canadians will:

- Access, control and share their health information online
- Receive faster diagnoses and treatment
- Have fewer emergency department visits and shorter hospital stays
- Benefit from improved patient safety

Save \$500 million/year

Health care providers will:

- Save time by accessing patients' complete health information in one place
- Communicate more efficiently across the health system
- Have improved confidence in their decision making
- Have more time to spend with patients

Save \$350 million/year

The health system will:

- Deliver more effective and equitable care
- Increase system capacity and plan more effectively
- Retain health workers
- Create value through an innovative ecosystem

Save \$500 million/year

Benefits from Infoway's Digital Health Investments

By the Numbers

\$43B

in benefits since inception from foundational investments

97K+

Canadians enrolled in telehomecare programs since 2010

Our COVID-19 Rapid Response Helped:

100K+

health care providers adopt virtual visit tools.

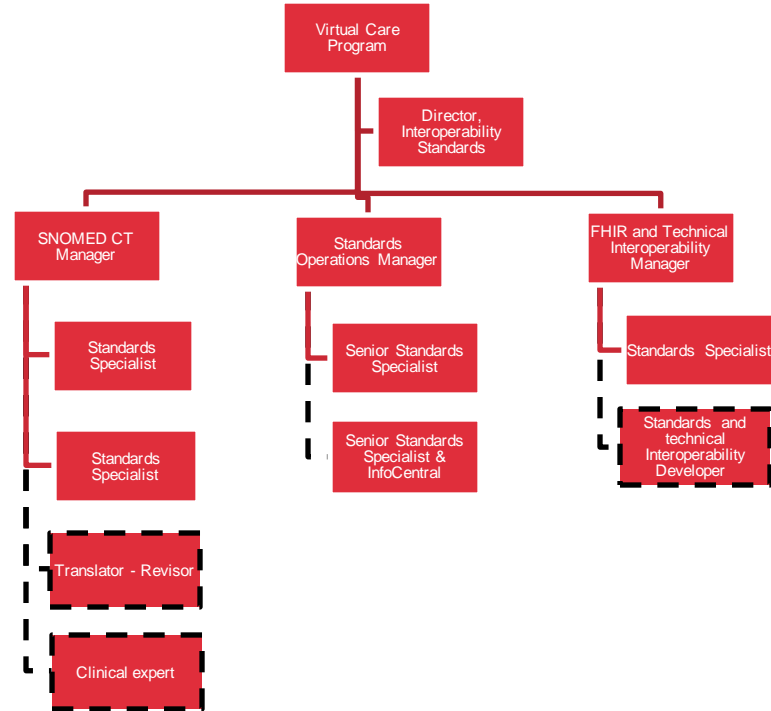

5M+

facilitate more than 5 million virtual visits for Canadians.

Infoway's investments in digital health initiatives have exceeded \$43 billion in benefits (cost savings and efficiencies) to Canadians and our health system. This includes investments in: connected health information (e.g., diagnostic imaging, drug and laboratory information systems), point-of-care systems (e.g., electronic medical records, telehealth) and virtual care (e.g., video and secure messages).

About the Interoperability Standards Team

SNOMED CT CA/ SNOMED CT

Infoway's [Standards Resources for COVID-19](#) contains regularly updated information on terminology changes in support of the Coronavirus outbreak.

SNOMED CT is the largest and most comprehensive clinical reference terminology in the world.

The SNOMED CT Canadian Edition* contains content that is specific to Canadian use contexts and is maintained by Canada Health Infoway. It is released in March and September of each year.

The International Release of SNOMED CT contains international content and is maintained by [SNOMED International](#) released on January 31 and July 31 of each year.

pCLOCD/ LOINC

COVID-19 Surveillance: Single source for all SARS-CoV-2/COVID-19 LOINC content, includes both released and pre-release terms. Content is updated as new terms are created and pre-released.

Infoway's [Standards Resources for COVID-19](#) contains regularly updated information on terminology changes in support of the Coronavirus outbreak.

LOINC® is the largest reference terminology used for Laboratory and Clinical observations in Canada today. The pan-Canadian LOINC Observation Code Database (pCLOCD) is a Canadian constraint of the larger LOINC terminology and includes example pan-Canadian names for jurisdictional lab viewers and recommended units of measure for use in Canada.

pCLOCD releases contains codes that are specific to use in Canada and is maintained by Canada Health Infoway. It is released on March 31 and September 30 of each year.

Applying Standards

An abstract graphic on the right side of the slide. It features a large, dark blue curved shape at the top right, and a red triangular shape pointing towards the bottom right, overlapping the white background.

Standards and Interoperability in Healthcare

Why Interoperability Matters

- Improves continuity of care, collaboration between health providers and patient access to their health information
- Breaks down data silos
- Reduces inefficiencies and redundancies within the health system

Implementation and Adoption Maturity Levels

SNOMED CT Maturity Framework

Implementation Level	
Level 5	Advanced Use
	SNOMED CT is recorded directly in the health records, and used as an ontology. Support for expressions, expression constraints (ECL) and the Machine Readable Concept Model (MRCM) may be provided.
Level 4	Semantic Network
	SNOMED CT is recorded directly in the health record, and used as a semantic network of relationships with simple ECL queries. All defining relationships may be traversed to support various system functions.
Level 3	Hierarchy
	SNOMED CT is recorded directly in the health record, and used as a hierarchy of codes to support various system functions.
Level 2	Simple Code System
	SNOMED CT is recorded directly in the health records, and used as a flat list of codes. Support for translated terms or multiple synonyms may also be provided.
Level 1	Mapping to SNOMED CT
	SNOMED CT is not recorded directly in the health record. SNOMED CT is used indirectly by mapping to SNOMED CT.
Level 0	Plans to Use SNOMED CT
	SNOMED CT is not yet used within the health record, but there are plans to do so. Clinical information is currently stored as free text or using local or vendor specific code systems.

Standards Process Maturity Levels

HL7® FHIR®

- **FMM0 (Draft)** – The resource is still in early development but has been accepted into the FHIR standard.
- **FMM1** – The Resource has no current technical errors and is believed to address all design goals.
- **FMM2** – The Resource has been tested and approved at a FHIR Connectathon with multiple FHIR-enabled computer systems tested.
- **FMM3** – The Resource passed all quality checks and an HL7 community ballot that determines if it is ready for trial use.
- **FMM4** – The Resource has been tested for functionality for all intended purposes, has been published in a formal HL7 publication, and is operating in at least one prototype system.
- **FMM5** – The Resource is in use in at least five distinct production systems operating in at least two countries.

The Journey

PrescribeIT® is Canada's national, not-for-profit e-prescribing service that provides safer and more effective medication management

- Electronic transmission of prescriptions electronically from EMR to the patient's pharmacy of choice
- Create Rx, Renew Rx, Rx Status (dispensed, cancelled etc)
- It is secure: it protects the patients' personal information from being sold or used for commercial activities
- HL7 FHIR Specification
- Leverages standards such as HL7, UCUM, pCLOCD and SNOMED-CT-CA

Fewer lost/damaged prescriptions

Improved medication safety

Decreased risk of privacy breaches due to fax transmission issues or unsecured email

Increased convenience and saved time and travel

Canadian Clinical Drug Data Set (CCDD)

- Canada Health Infoway partnered with Health Canada to create a computable and human readable drug data set that is now owned and managed by Health Canada.
- Allows systems to exchange drug data using common drug identifiers
- Supported by knowledge base vendors and clinical systems connected to PrescribeIT®
 - Making prescribing safer for patients
 - Making clinical workflows more efficient
- CCDD is an interchange terminology

<https://infocentral.infoway-inforoute.ca/en/standards/canadian/ccdd>

Patient Summary-CA Specification

What is it?

- The Pan-Canadian Patient Summary Interoperability Specification is an implementable, testable specification, based on the IHE International Patient Summary specification and HL7 IPS IG
- Defines building blocks (both: data model and interoperability) to create and share condition-independent and specialty-agnostic patient summaries

Content Data Model

Purpose

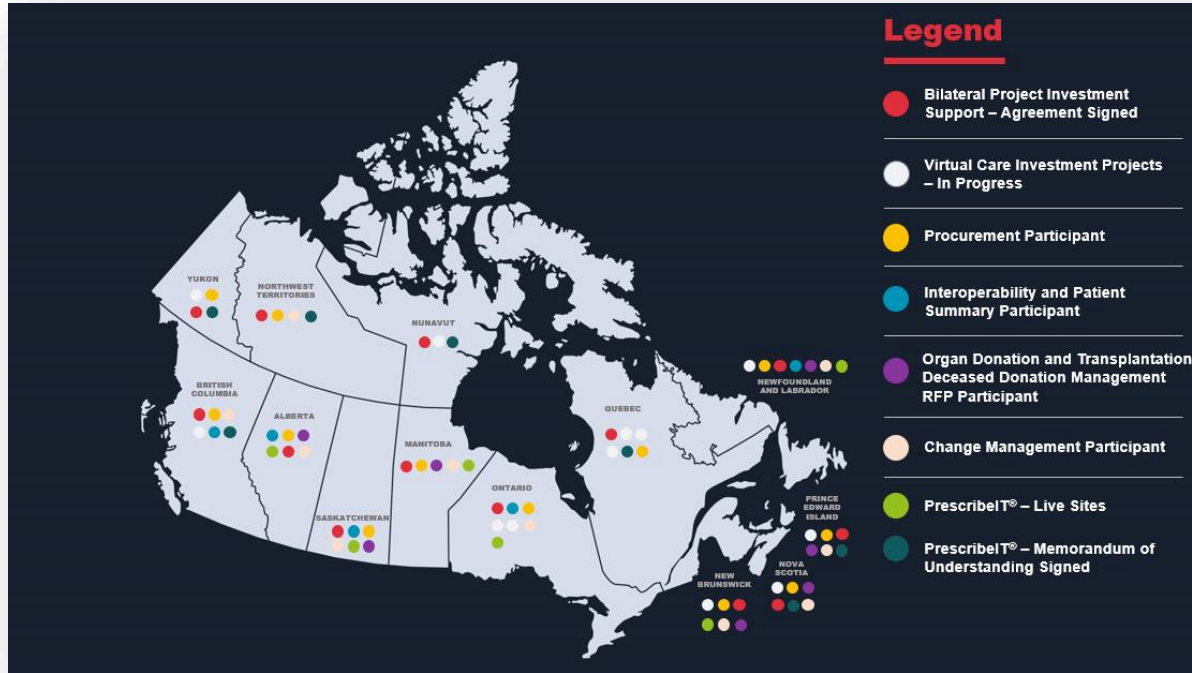

- Defines the Patient Summary-CA content data model and provides the required Implementation Guidance
- This section of the specification defines each data element, cardinality, data type, constraints, and code system references - all of the details needed for two systems to be semantically interoperable with each other

Standards

- SNOMED CT – CA Edition
- LOINC – pCLOCD
- panCanadian Valuesets
- Others

Canadian Implementations

Improving Interoperability of ODT Data Standards

Data element name	Valid values
Consented Donor Organ Disposition	<ul style="list-style-type: none">• 37401000087100: Organ donation for transplant• 37391000087103: Organ donation for research• 37381000087100: Organ donation for medical education <p>Note: The value set codes are sourced from SNOMED CT Canadian Edition.</p>

Majority of the coding for ODT value sets were sourced from established standards including:

- International Organization for Standardization (ISO)
- Health Level Seven (HL7)
- Logical Observation Identifiers Names and Codes (LOINC)
- **Systematized Nomenclature of Medicine Clinical Terms (SNOMED CT) Canadian Edition (managed by Infoway)**
 - **DD MDS** – 89 new concepts & descriptions created
 - **Tx/LD MDS** – 76 new concepts & descriptions created

March 2023 Release of the Canadian Edition of SNOMED CT now available!

The [March 2023 Canadian Edition \(CA Edition\)](#) is harmonized with the SNOMED International February 2023 monthly release. Infoway also releases updated versions of SNOMED CT [subsets](#) as part of the CA Edition. The March 2023 CA Edition of SNOMED CT and all pan-Canadian Subsets are available on the [Terminology Gateway](#).

March 2023 pCLOCD Release is Now Available

Latest [pan-Canadian LOINC Observation Code Database \(pCLOCD\)](#) release R05.18.00_2.74 is now available for review and implementation accessible from Terminology Gateway. [Highlights](#) of this release includes updates based on February 2023 LOINC 2.74 release and changes based on pCLOCD Community requests for change.
