

School of Health Information Science Seminar:

Health Informatics and the Equity Challenge: What Role Can Informaticians Play?

Speaker:

Dr. Christo El Morr

Associate Professor of Health Informatics at the
School of Health Policy and Management at York University

Sep 28th on Zoom

12:00PM PT

Health Informatics has contributed immensely to the progress in health delivery for populations around the globe, be it the form of localized eHealth solutions, or virtual care; locally and globally. Equity is a principle to commit to reduce and eliminate disparities in access to health. There has not been much attention by researchers in informatics and policy to the role that health informatics might play to achieve health equity (or at least reduce health inequities). This presentation will raise questions and present work related to the Health Informatics and its impact on Equity, and suggest future research directions.
