

High Fidelity Patient Mannequin Skills Orientation

The Center for Interprofessional Clinical Learning in Simulation (CICSL) has partnered with Island Health, Island Medical Program (UBC) and School of Nursing, University of Victoria have collaborated together to provide a 'skills orientation' (see pdf) for faculty users of the simulation labs.

It has been agreed that the team at CICSL alongside faculty liaison designates will ensure that all faculty users have the resources and training required to safely and successfully operate the patient mannequins and utilize the laboratory resources.

The pdf entitled "Skills Orientation and Maintenance Checklist" outlines the basic and advanced skill required to operate the mannequin and will be reviewed yearly or at the discretion of the faculty member.

To arrange an orientation session, please contact Maureen Ryan Clinical Simulation(s) Coordinator mmryan@uvic.ca at the School of Nursing.
