Learn the major achievements in Greek and Roman archaeology throughout the Mediterranean, from Bronze Age Greece to the Late Roman periods focusing on material culture and archaeological methodology. Emphasis will be placed on the changing relationship between humans, their environment and their culture through the archaeological record, including cities, sanctuaries and works of art. Explore the development of archaeology as a discipline.

Learning Outcomes

- Analysis of core elements of Greek and Roman civilization at the introductory level through images and primary and secondary sources;
- Assessment of the appropriate methodology of excavation through case studies and archaeological theory;
- Exploration of new technologies for practicing archaeology, including 3D modeling and Virtual Reality.
