coLab

LOGIC MODEL *Co/Lab: A collaborative community laboratory on substance use and harm reduction*

Intended Outcomes

Ultimate Outcomes

Increased capacity for equity-oriented and community-level monitoring

Increased capacity of people who use substances for coordinated involvement in community-based and action-oriented monitoring and surveillance

Intermediate Outcomes

Build regional and provincial capacity for community-based and action-oriented monitoring and surveillance of substance-related harms

Support access to evidence and build capacity for action

Immediate Outcomes

Enhance collaboration and knowledge exchange within and among stakeholders

Build the capacity of people who use substances for coordinated involvement

Support public dialogue and empowerment to shape community responses to reduce the harms of substance use

Create an equity oriented framework for monitoring substance use, related harms, and their determinants in communities

Project activities and outputs

Outputs

Project website including data visualization & social media

Webinars, CISUR Bulletins & blogs

Academic presentations and publications

Community of Practice (CofP) webinars and round table events

Community Profile Reports

Activities

Creation of a provincial peer network of people who use(d) substances in substance use monitoring and research

Creation of Co/Lab project team and provincial CofP to build capacity

Creation of an equity-oriented monitoring framework

Ongoing community-level evaluation of substance-related harms and responses

Community dialogue events and other community KT activities
