

Have you used an **Overdose Prevention Site (OPS)?**

Why using at an OPS is safer than this bathroom:

- You don't have to use alone
- You don't have to rush and can access supplies
- You can sit down and use a table to set up
- You can access drug checking and do a test shot
- If you overdose, staff can give you some oxygen
- If you're ok with just oxygen, staff might not have to call 911 or give you naloxone

Talk to staff for more info, and stay safe ♥
