Public Lecture

TIE Talks are a series of public events showcasing Technology Innovation in Education and discussing current hot topics in teaching and learning.

John Willinsky

Professor, Stanford University School of Education
Fellow of the Royal Society of Canada

The Intellectual Properties of Learning and the Changing Political Economy of Technology in Canada

Friday, 19 October 2012, 11:00AM – 12:00PM
Senate Chambers (A180), University Centre

Presented by the **Learning & Teaching Centre** and the **Technology Integration and Evaluation (TIE) Research Lab**

What often goes missing in today's discussions of educational technology is the intellectual property question. What could we be teaching the young about this decisive factor, whether in determining access to knowledge or in participating in an information economy? How have recent Canadian Supreme Court decisions, the amended copyright act, and research funding agencies altered education's place in the cultural life of this country? And, finally, how can this concept of *intellectual property* focus greater attention on the intellectual value and contribution of integrating technology in education? Such are the questions to be addressed, if not entirely answered, in this presentation.
