LEARNING OUTCOMES

1. Understand the interaction between microorganisms and humans as hosts at various levels of complexity: individual, population, and community.
2. Identify different methods of control of microbial diseases such as antimicrobial drugs and vaccines.
3. Describe some of the most common microbial diseases in BC, Canada, North America and the world.
4. Develop ability to critically read primary literature and synthesize findings to prepare case reports.

COURSE DESCRIPTION.

An introduction to human infectious diseases and the biology and ecology of pathogenic bacteria and viruses. Basic principles of epidemiology of infectious diseases. Methods of control: antibiotics, antivirals and vaccines. Classification, pathogenicity, molecular diagnostic, epidemiology of various types of human infectious diseases (respiratory, digestive, etc.).

EVALUATION

1. MID-TERM EXAM 1: (25 pts)
2. MID-TERM EXAM 2: (30 pts)
3. FINAL EXAM: (40 pts)
4. ASSIGNMENT: (5 pts)
Case Study Report (3 pages)

5. BONUS (5 pts)

1) Critical review of a peer-reviewed research article in epidemiology of infectious diseases. 2-page report and a 5-slide Powerpoint presentation. (5 pts)
