Did you know that the lemurs of Madagascar are one of the most diverse primate groups, yet the most threatened mammal group in the world? Join Dr. Timothy Eppley, a Postdoctoral Fellow with San Diego Zoo Wildlife Alliance, to learn about the fascinating and unique world of Madagascar, and the issues surrounding lemur conservation. Dr. Eppley's research focuses on the effects of fragmented landscapes on lemur behavior and feeding ecology, and these data help to direct lemur conservation efforts in the rainforests of northeast Madagascar. He will be talking about his current projects which include assessing the species range distribution of the Critically Endangered red ruffed lemur. Although this iconic species is charismatic and ubiquitous within zoological parks worldwide, including San Diego Zoo, it is among the most endangered primate species on earth.

**EVERYONE WELCOME**
