ANTH 250: LAB
PHYSICAL ANTHROPOLOGY

INSTRUCTOR: Becky Wigen

Lab Description and Objectives

Physical/biological anthropology covers a broad array of topics and these labs are planned to give you a chance to experience many of those topics. The labs include an introduction to genetics, examination of real human skeletons including how to determine age and sex, comparative skeletal anatomy of primates, hands-on examination of human fossil casts and anthropometry (measuring living humans).

Skills Development
At an introductory level, these labs teach skills in measurement and manipulation of human skeletons, some basic statistics, graphical presentation, writing and critical thinking.
