23 March	Kristian Dubrawski	The interface of nature-based solutions and community engagement
30 March	ES 501/601	Student proposal presentations
30 March	ES 501/601	Student proposal presentations

You are invited to attend our weekly Research Colloquium. This year, we are hosting the seminar online via Zoom, and with *limited* in-person capacity in DTB B-255. Speakers will be a mix of in-person and on Zoom. Please contact Gabe Schepens (gschepens@uvic.ca) for the login credentials. This login information will provide access for the entire semester.

Graduate student hosts will begin with a land acknowledgement and introduce the speaker. After a 35-40 minute talk, question period will begin with the in-person graduate student audience. If time permits, we will open questions up to the online audience more broadly. You can type your questions in the chat and a moderator will call upon you when it is your turn.

Due to the dynamic nature of public health advisories, we are prepared to carry out our seminar series fully online if necessary, and will update guests accordingly.
