A CRITICAL APPROACH TO THE GEOGRAPHIES OF BRITISH COLUMBIA

COURSE DESCRIPTION

This course introduces students to the physical and human geographies of British Columbia. Conflict or struggle is central to the province's social experience recognized in persistent disputes around such matters as resource exploitation, environmental protection, Indigenous sovereignty, immigration, and urban development. Through engaging lectures, class discussions, videos and texts, this course will carefully analyze historical and present struggles critically interrogating the values and assumptions of different groups vying to define our province and its future. Students should leave with a more sophisticated appreciation both of the field of critical geography and of the province of BC.

Critical geographies, and critical thinking more generally, is often misrepresented as cynical, pessimistic, or "being against things." In this class it should be understood in terms of healthy skepticism and recognizing the world could / should be otherwise. This includes questioning of status quo "common sense"; trying to make important linkages and connections; recognizing and evaluating multiple perspectives and the values and assumptions underlying each (including our own); evaluating evidence and arguments (while recognizing power relations in knowledge claims), arriving at defensible positions on issues and working towards a more respectful, inclusive, just, and fair world (or province and country in this case).
