Travis Martin began teaching as a sessional instructor in 2015 and is currently an Assistant Teaching Professor in the Department of Physics and Astronomy. He has served as a member of Senate since 2023, including on the Senate Committee on Learning and Teaching, as well as on the Senate Subcommittee on CES during its term.

Within the Faculty of Science, Travis serves as the Accessibility Coordinator, where he supports the development of accessibility initiatives and acts as a liaison between the Faculty and the Centre for Accessible Learning (CAL) to identify pedagogically and discipline appropriate responses to accommodation challenges.

Candidacy Statement:

I am applying for a second term on Senate because I am concerned about the institutional impact of the rapid growth in accommodation registrations, the evolving nature of accommodation supports, and the implications these changes, along with Generative AI, are having on course design, instructional practices, and academic standards. I believe it is critically important that institutional policies support both student access and pedagogical integrity. I also believe strongly in the democratic nature of Senate and its ability to provide measured and evidence-informed oversight of academic policy, especially during periods of rapid institutional change.
