

I have been an Assistant Teaching Professor in the Department of Mathematics and Statistics since 2016. Since that time, I have taken on several roles focused on enhancing student success, such as serving on the curriculum committee and as an academic advisor in my department. I am interested in the ways that education is changing due to increased uses of technology in our classes, which provides both opportunities and challenges. I am currently a member of the University's Digital Learning Committee, which is working towards forming a Digital Learning Plan to help guide the University's implementation of digital technologies in our future teaching. I am also a member of the Society for Teaching and Learning in Higher Education's national committee on academic integrity and contract cheating.

I am strongly committed to the principles of collegial governance at the University. In 2019 I was the chair of the committee charged with drafting my department's unit standards document. Since 2018 I have been an active member of the Faculty Association; at the Association I have been a member of the Teaching Faculty Committee, the Advising and Dispute Resolution Committee, the Collective Agreement Committee, and the Executive Committee, as well as most recently serving as a member of the Negotiating Team for the 2022-2025 Collective Agreement. I hope to join Senate to continue contributing to the collegial processes that enable UVic to be an excellent place for both students and faculty members.
